

AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions and listings of claims in the application:

LISTING OF CLAIMS:

1. (currently amended): A powdered resin composition for slush molding comprising a thermoplastic polyurethane resin powder (B) as the main component and a fine particle powder (A) of a vinyl type copolymer comprising a copolymer of an alkyl (meth)acrylate in a weight ratio of 99-70% and a polyhydric alcohol poly(meth)acrylate in a weight ratio of 1-30% ~~a monomer (a01) having one vinyl group and a monomer (a02) having two or more vinyl groups~~ and having a cross-linked structure as a powder flowability improver, wherein the fine particle powder (A) is not melted in the temperature range of 200 to 300°C, the resin powder (B) has a volume average particle diameter in a range from 70 to 300 µm and is capable of melting at 200 to 300°C, and the thermoplastic polyurethane resin powder (B) and the fine particle powder are dry-blended, wherein the fine particle powder (A) of a vinyl type copolymer is contained in an amount from 0.1% by weight to 1.5% by weight to the thermoplastic polyurethane resin powder (B).

2. and 3. (canceled).

4. (original): The powdered resin composition according to claim 3, wherein the fine particle powder (A) of a vinyl type copolymer is a copolymer of methyl methacrylate and ethylene glycol dimethacrylate.

5. (currently amended): A powdered resin composition for slush molding comprising a thermoplastic polyurethane resin powder (B) as the main component and a fine particle powder (E) of a vinyl type copolymer comprising a copolymer of an alkyl (meth)acrylate and a hydroxyl-containing vinyl type monomer ~~a monomer (a01) having one vinyl group and a monomer (a03) having one or more vinyl groups and one or more functional groups other than a vinyl group~~ and having a cross-linked structure as a powder flowability improver, wherein the fine particle powder (E) is not melted in the temperature range of 200 to 300°C, the resin powder (B) has a volume average particle diameter in a range from 70 to 300 µm and is capable of melting at 200 to 300°C, and the thermoplastic polyurethane resin powder (B) and the fine particle powder are dry-blended, wherein the fine particle powder (E) of a vinyl type copolymer is contained in an amount from 0.1% by weight to 1.5% by weight to the thermoplastic polyurethane resin powder (B).

6. (currently amended): The powdered resin composition according to claim 5, wherein the fine particle powder (E) of a vinyl type copolymer is a copolymer of methyl (meth)acrylate and hydroxyethyl (meth)acrylate ~~functional group other than a vinyl group is at least one functional group of a hydroxyl, a carboxyl, and an amino group.~~

7. (currently amended): The powdered resin composition according to claim 5, wherein the fine particle powder (E) of a vinyl type copolymer has a cross-linked structure

~~formed by crosslinking a hydroxyl group with an organic polyisocyanate functional group other than a vinyl group with a compound having two or more isocyanate groups.~~

8. (previously presented): The powdered resin composition according to claim 1 further containing a silica fine powder.

9. (previously presented): The powdered resin composition according to claim 1, wherein the fine particle powder (A) of a vinyl type copolymer has a volume average particle diameter in a range from 0.1 μm to 100 μm .

10. (canceled).

11. (previously presented): The powdered resin composition according to claim 1 being obtained by dry-blending the thermoplastic polyurethane resin powder (B) with the fine particle powder (A) of a vinyl type copolymer together with an additive (D) to be added.

12. (previously presented): A urethane resin molded product produced from the powdered resin composition for slush molding according to claim 1.

13. and 14. (canceled).

15. (currently amended): The powdered resin composition according to claim 6, wherein the fine particle powder (E) of a vinyl type copolymer has a cross-linked structure

formed by crosslinking a hydroxyl group with an organic polyisocyanate functional group other than a vinyl group with a compound having two or more isocyanate groups.

16. (previously presented): The powdered resin composition according to claim 5 further containing a silica fine powder.

17. (previously presented): The powdered resin composition according to claim 5, wherein the fine particle powder (E) of a vinyl type copolymer has a volume average particle diameter in a range from 0.1 μm to 100 μm .

18. (canceled).

19. (previously presented): The powdered resin composition according to claim 5 being obtained by dry-blending the thermoplastic polyurethane resin powder (B) with the fine particle powder (E) of a vinyl type copolymer together with an additive (D) to be added.

20. (previously presented): A urethane resin molded product produced from the powdered resin composition for slush molding according to claim 5.
